

BLITz CLEAN UP NEUTRALISER

MADE IN
AUSTRALIA

The BLITz Clean Up neutraliser can be used after all weld cleaning solutions. With an inbuilt pH indicator, this neutraliser is essential if you want to make sure that all acidic residue has been completely removed.

The neutraliser will lightly fizz and foam a yellow to green colour when it reacts with the acidic residue. Once the fizzing and foaming has stopped and the work piece runs a deep purple, you will know that all of the acidic residue is completely neutralised, simply wash off with water and wipe dry for a clean and neutral surface.

Suitable to neutralise B-30, B-50, EKP-50 and EASYklean All Machine Solutions.

Part Number	Description
MST128	Neutraliser Solution 1 Litre
MST129	Neutraliser Solution 5 Litre
MST130	Spray bottle for Neutraliser Solution (empty)
